CAPITAL EXPENDITURE PROGRAMME 1957 - 1962

Interim Report of the Economic Planning Committee

Your Excellency,

We were appointed to constitute the Economic Planning Committee of Executive Council on the 11th October, 1957, and charged with the task of formulating a Capital Expenditure Programme for Mauritius covering the period 1st July 1957 to 30th June 1962.

2. We have unfortunately been deprived of the services of the Ministerial Secretary to the Treasury as Member of the Committee, because of illness, and of those of the Minister of Works and Communications, because of his absence from the Colony for some part of our deliberations, although we have had the valuable assistance of the Minister of Agriculture.

3. In preparation for our work, all Ministries and Departments were asked in July last to prepare proposals for inclusion in a revised Capital Expenditure Programme covering the five years up to mid 1962. It is on the basis of the proposals put forward in response to this request that we have conducted our studies. It early became clear to us that if a Capital Expenditure Programme of the scope and complexity required by the situation of Mauritius, and capable of execution with the resources available to us, was to be formulated, it would be necessary for us to make our examination of the various proposals put forward as thorough as possible; and also that we should have time to consider associated problems, for example, the extent to which the various construction programmes envisaged could be co-ordinated, and also the possibility of achieving the highest possible degree of standardisation e.g. in housing and office units, so as to permit the employment of local trades in the mass manufacture of such items and fittings as tables, chairs, window frames etc. Only if the Programme is conceived as a whole, and the execution of its various parts dovetailed to secure the most efficient use of the skill and labour forces available to Mauritius, can we be sure that the maximum amount of progress is achieved for the expenditures made, the most urgent needs of the territory met in proper priority, and the utilisation of all the local skills and trades provided for.

4. We consider that the formulation of a truly co-ordinated Capital Expenditure Programme of this type will occupy us for some three or four months, if we are to be sure that the recommendations we made are fully thought out. On the other hand, it is manifest that there are some projects which are either so urgent or so obviously desirable that they must be included in any Capital Expenditure Programme we recommend. In particular there are many schemes going forward at this moment which will have to be continued and completed. Moreover it is our belief, on the evidence available to us, that Mauritius can embark on a very greatly expanded Capital Expenditure Programme in the five year period with which we are concerned, and if this expansion is to be achieved it is essential that it should be begun at once. Even at this early stage we are satisfied that Mauritius should be able to mount a Capital Expenditure Programme of the order of Rs200m in the five year period. Such a target involves capital expenditure

/ by the .....

by the Government at the rate of Rs 40m p.a. while the highest rate so far achieved is Rs 23m p.a. It follows that if this very much higher average rate (involving a virtual doubling of the pace of development in the Island) is to be attained, we should aim to step up the rate of execution of work in 1957/58 to well above the rate of Rs 23m attained in 1956/57).

5. In the light of these considerations we have come to the conclusion that we should present an interim report setting out those projects which we consider should be embarked upon at once, and approval of which need not wait until we have gone through the process of thorough study and co-ordination referred to above. The present report is, therefore, of this interim nature. We recommend that the projects listed in Schedule I to this report should be embarked upon at once, that is to say in the course of the current financial year. Our proposals for the remainder of the period will be embodied in our final report which we shall aim to present in time for consideration in Executive and Legislative Councils in the early weeks of the next Session of Legislative Council.

RESOURCES

6. In recommending an immediate start on certain projects we are conscious that it is incumbent upon us to assure Members of Executive and Legislative Councils that the resources available to Mauritius for Capital Expenditure are such as to permit the execution at least of those priority projects. In fact, we are satisfied that the resources available to the territory will permit the implementation of a programme greatly in excess of the actual cost of the projects listed in Schedule I, and it is in the light of this conclusion that we intend to proceed to the preparation of our final report. In order, however, to indicate the nature and amounts of the total resources available to the Colony for Capital Expenditure Programme in the five year period as a whole we have prepared the statement set out in the following paragraph.

7. The following table lists the resources for Capital Expenditure which we foresee as being available to the Colony in the course of the next five years:

(a) Assured Funds (i.e. funds which have already accrued or will certainly accrue to the Government).

(i) Non-loan Funds	Rs m	Rs m.
C.D.& W. Allocation(balance at 1.7.57)	9.136	
Reserve Fund	22.000	
Transfer from Surplus Funds	18.000	
Development & Welfare Fund (balance at 1.7.57)	8.920	
Annual contributions from Revenue 1957/58 - 1961/62	32.500	
Capital Receipts 57/58-61/62	.050	
		90.656

/ (ii) Loan Funds

	Brought Forward	Rsm. 90.656

(ii) Loan Funds

	Rs m.	Rs m.
Loan Funds unexpended at 1.7.57	.017	
Note Security Fund (local investment)	10.000	
Savings Bank (local investment)	2.000	
Consolidated Sinking Fund(local investment)	15.000	
Other Government Funds (local investment)	1.194	
		28.211

Total certain resources in the period ... Rs m. 118.867

(b) Potential Funds (i.e. funds which may reasonably be expected to become available in the period)

(i) Non-loan Funds

	Rs m.	Rs.m.
Grants for specific projects		7.500

(ii) Loan Funds

Government Funds (local investment)	32.500	
Local public loans	12.500	
External loan(if required) (£2m)	27.000	
		72.000
Total potential funds		79.500

Total funds(assured plus potential) in the period Rs m. 198.367

of which non-loan funds Rsm. 98.156

of which loan funds Rsm.100.211

8. Further clarification of these figures will be given in our final report but even if the potential resources indicated in (b) are ignored it will be seen that the Colony has already at its disposal or can rely upon a total amount well in excess of the amounts required to implement the priority projects listed in Schedule I of this report.

EXPENDITURE

9. In selecting the priority projects listed in Schedule I we have had regard primarily to the criterion of essentiality but only in slightly less degree to the desirability of bringing development to Mauritius on an island wide basis (the distribution of the priority projects is indicated in Schedule II). A further important consideration in our mind was the degree to which the projects we have listed are capable of immediate implementation. In some cases (e.g. the Tuberculosis Hospital, the Midlands-Pitel Road) work can be begun within a matter of weeks once the approval of Legislative Council is

/ obtained...

obtained. In other cases (e.g. the Bell Village to St Jean Road) that approval is required at an early stage in order to enable surveys and plans which are a necessary preliminary to actual construction to be made. We have also directed our attention specifically to the urgent necessity of mounting as quickly as possible projects which are aimed at stimulating the level of economic activity in the Colony and exploiting to the full the economic resources available to us. Hence the emphasis in Schedule I on irrigation, agricultural and electricity projects.

RECURRENT IMPLICATIONS

10. It is not possible at this early stage for us to make any firm forecast of the recurrent implications either of the priority projects listed in Schedule I, or of the complete Capital Expenditure Programme which we shall recommend. Many factors affecting the ability of the territory to carry additional recurrent charges will become clearer in the course of the next few months. Not only will the projects we recommend themselves throw additional burdens on the recurrent revenue of the territory (e.g. to pay for additional school teachers, doctors and nurses, technical staff, maintenance of buildings, debt charges etc) but there are also certain proposals at present under discussion which will have a similar and considerable impact. These proposals are not development in the capital sense (they include the cost of salaries revision for the whole of the Civil Service, the cost to Government of establishing a Social Insurance Scheme, including an increase in Old Age Pensions, the inevitable rise each year in recurrent expenditure due to salary increments and so forth), but equally with the additional recurrent costs flowing from the Capital Expenditure Programme they will involve the need to secure a steady and continuing rise in our annual recurrent revenue. The extent to which that revenue can be increased depends in the last resort on the general prosperity of Mauritius and its freedom from natural disaster and is limited by the proved and universally accepted economic fact that a developing territory must beware of killing economic enterprise by imposing high taxation. It may be, therefore, that the principal limitation on our Capital Expenditure plans may be the extent to which we can assemble permanent annual revenue to cover the cost of maintaining the new services we shall create by the implementation of those plans, as well as the other services the Government has in mind outside the Capital Expenditure field. This is a matter which will engage our close attention in the preparation of our final report, but so far as the priority projects set out in Schedule I are concerned we are satisfied that the territorial revenues will be able to support the additional recurrent charges thrown up by those projects, provided the weight of additional recurrent charges not arising from the projects is kept at a reasonable level.

.....

11. We recommend, in the light of the foregoing, that this interim report be tabled in Legislative Council at the earliest possible date, and that the approval of Council be sought for the implementation, as a matter of priority, of the

/ projects .....

projects listed in Schedule I. If Mauritius is to accomplish the task of development which must be done if the true potentialities of the island and its people are to be realised, and which we are convinced can be done with the resources available to us, it is imperative that a start should be made as quickly as possible. It is in the hope that that start can be authorised before the Legislative Council rises for its summer recess that we have brought forward this interim report as a matter of urgency.

12. We should not like to conclude this report without paying tribute to the zeal and energy displayed by our Secretary Mr P.A.Gore and our assistant Secretary, Mr G.Ramasawmy; and to the cooperation we have received from our Ministerial colleagues and from all Heads of Departments whom we have had occasion to consult.
